

### presence-absence model: summed response (total effect)

$\Pr[\text{pred}(\text{mean\_temp}=\text{min}) > \text{pred}(\text{mean\_temp}=\text{max})] = 0.99$

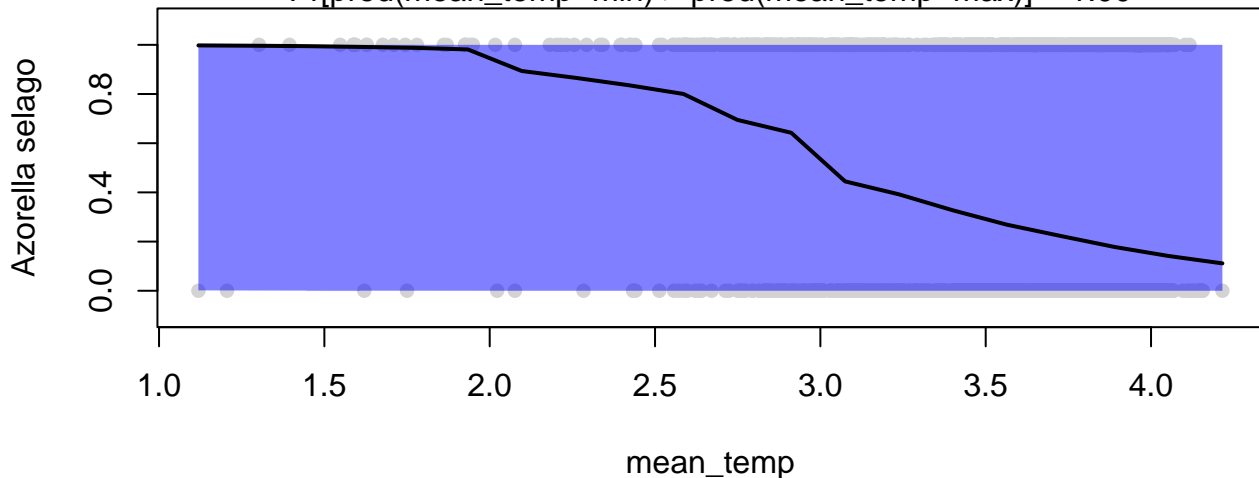

### presence-absence model: summed response (marginal effect)

$\Pr[\text{pred}(\text{mean\_temp}=\text{min}) < \text{pred}(\text{mean\_temp}=\text{max})] = 0.55$

### presence-absence model: example species (total effect)

$\Pr[\text{pred}(\text{mean\_temp}=\text{min}) > \text{pred}(\text{mean\_temp}=\text{max})] = 1.00$

### presence-absence model: example species (marginal effect)

$\Pr[\text{pred}(\text{mean\_temp}=\text{min}) < \text{pred}(\text{mean\_temp}=\text{max})] = 1.00$

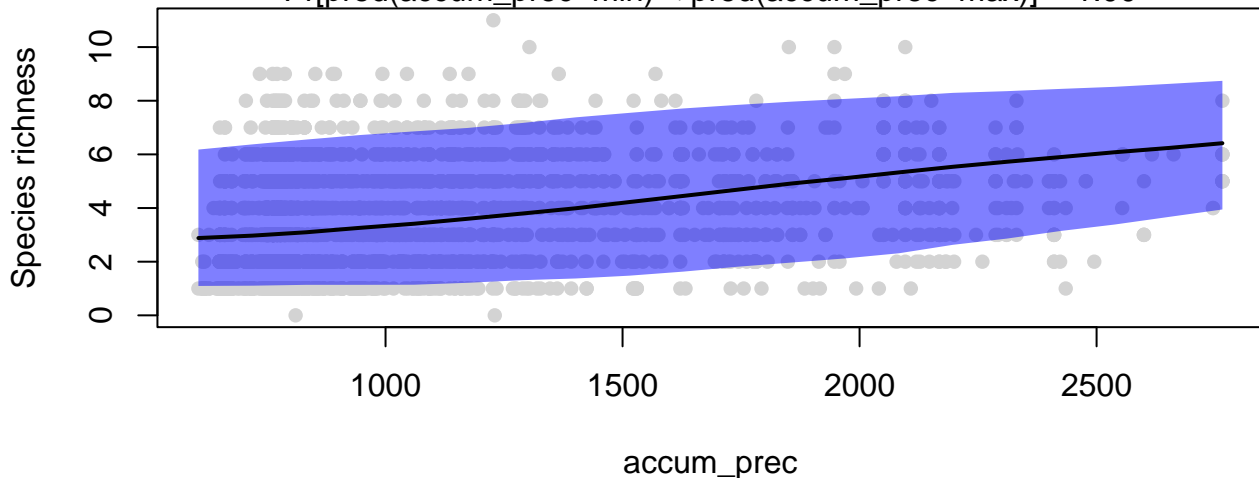

### presence-absence model: summed response (total effect)

$\Pr[\text{pred}(\text{accum\_prec}=\text{min}) < \text{pred}(\text{accum\_prec}=\text{max})] = 0.99$

### presence-absence model: summed response (marginal effect)

$\Pr[\text{pred}(\text{accum\_prec}=\text{min}) < \text{pred}(\text{accum\_prec}=\text{max})] = 1.00$

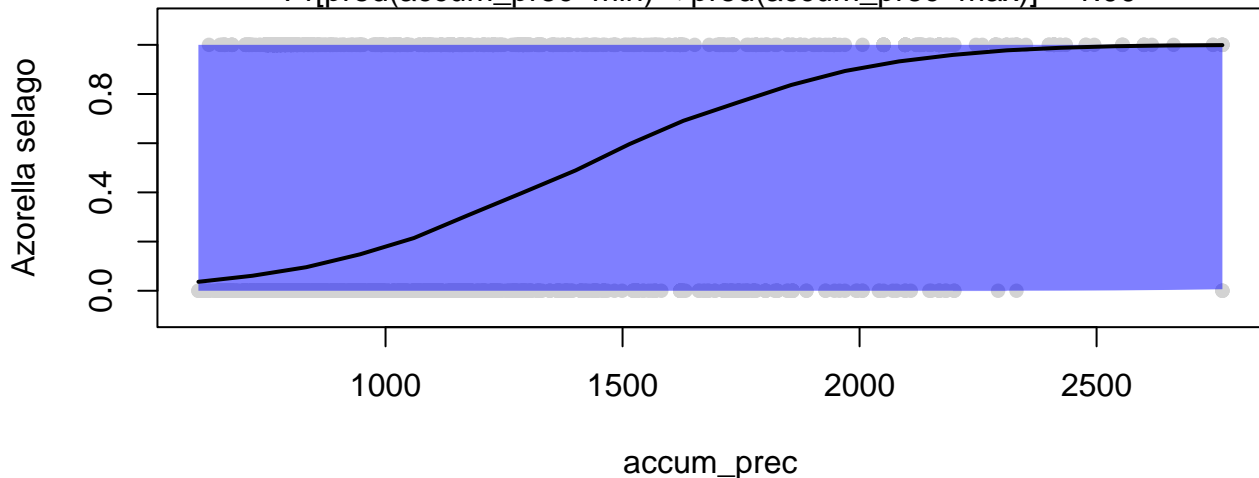

### presence-absence model: example species (total effect)

$\Pr[\text{pred}(\text{accum\_prec}=\text{min}) < \text{pred}(\text{accum\_prec}=\text{max})] = 1.00$

### presence-absence model: example species (marginal effect)

$\Pr[\text{pred}(\text{accum\_prec}=\text{min}) < \text{pred}(\text{accum\_prec}=\text{max})] = 1.00$
